

PROFILE

I shipped my first software for a client in 2019, while still at university. I bring 5+ years in product engineering teams and today I lead engineering and architecture at **Mango**, across hands-on delivery, system design, and team execution. I also co-founded **Geome7ric** as a side venture.

TECHNICAL SKILLS & LEADERSHIP

System Design & Architecture Microservices · REST & API design · PostgreSQL / SQL optimization · Caching strategies	Product Engineering React / Next.js ecosystem · React Native / Expo ecosystem · Supabase / BaaS · Serverless & edge
Technical Leadership Sprint planning & delivery · CI/CD & release management · Code review culture · Onboarding & mentoring	Backend & Cloud Engineering Node.js · TypeScript · NestJS · Ruby on Rails · Laravel · AWS · Docker · CI/CD · PostgreSQL · MySQL · Redis

PROFESSIONAL EXPERIENCE

Tech Lead Mango I lead the technical evolution of a multi-product fintech platform, connecting business strategy, architecture, and execution. My impact has evolved from hands-on implementation across payments and integrations toward designing products, standards, and delivery mechanisms that help the team operate with greater quality, security, and predictability. - Designed Mango's engineering system: separated roadmap, backlog, specs, and ADRs from a versioned agent layer distributed to consumer repos through PRs. - Directed the migration of 15 functional modules from Vue 2 to Next.js while preserving critical workflows and contracts with the existing backend. - Strengthened the reliability of financial integrations through observability, health checks, traceability, and automated rollback.	MAR 2025 – PRESENT
Software Engineer / Backend Lead Kalkomey · Contract via RazorTech · HuntWise Worked through RazorTech on HuntWise, a Kalkomey product, and progressed from backend execution to technical leadership across its API and CMS. Coordinated delivery with Product, Marketing, and engineering teams, and was promoted for leadership and technical contributions. - Designed and implemented an integration between Kalkomey systems that enabled more efficient subscription and revenue workflows. - Established a test suite and reusable tooling from scratch for common scenarios, improving code reliability and maintainability.	FEB 2023 – DEC 2024
Software Engineer Cargill · Contract via RazorTech Provided backend engineering services to Cargill through RazorTech, delivering for an international client and evolving existing integrations and services. - Delivered features and third-party API integrations within sprint commitments. - Identified bottlenecks and applied test-driven solutions to fix defects and improve performance.	SEP 2022 – FEB 2023
Full Stack Developer Nuqlea Contributed to the full-stack development of a hybrid B2C mobile application and its transition from beta to production on the App Store and Google Play, working across architecture, backend, and user experience. - Designed and developed mobile and backend workflows with Quasar (Vue.js), Laravel, and MySQL, contributing to the platform's architectural evolution. - Prepared the application for production by resolving performance issues and managing releases to the App Store and Google Play.	JUN 2021 – AUG 2022

INDUSTRIAL SYSTEMS FOUNDATION

Systems Administrator, Supervised Professional Practice

Indoscience / Profertil

DEC 2020 – MAY 2021

Completed my supervised professional practice at Indoscience S.A., providing services to Profertil S.A. I worked in a real industrial operation, administering servers and automating observability, backup, and maintenance tasks to reduce manual work and improve operational continuity.

- Administered and monitored Windows Server, SQL Server, and Aspen InfoPlus.21 environments used by industrial operations.
- Automated daily checks and maintenance tasks with Python, SQLPlus, and PowerShell.

INDEPENDENT VENTURE AND PRODUCTS

Co-Founder · Side venture

Geome7ric

FEB 2020 – PRESENT

I co-founded Geome7ric and lead client software projects alongside my work at Mango. For Badger, I shipped an industrial-inventory app and back office to production; I have also built tools for field operations. I own architecture, implementation, and delivery.

- Co-founded Geome7ric, leading product strategy, technical architecture, and client relationships.
- Built and shipped multiple custom products end-to-end: AI knowledge assistants, carpooling apps, and multi-tenant platforms.
- Designed and deployed production systems using Next.js, React Native (Expo), Supabase, PostgreSQL, and Mercado Pago.

SELECTED WORK

Mango Engineering + Agentic MANGO Separated roadmap, backlog, specs, and ADRs from shared rules and agents; the agent layer is versioned and reaches consumer repos through PRs. Markdown · Bash · Node.js · GitHub Actions · MCP	Badger GEOME7RIC We shipped an inventory/assignments platform to production: Android release, production backoffice, health checks, and monitoring. Turborepo · Next.js · Expo · Supabase
Asiento Libre Designed and built the mobile experience for passengers and drivers, then validated payment, cancellation, and refund in a controlled test across the app, backend, and Mercado Pago. React Native · Expo · Supabase · Mercado Pago	

EDUCATION

Computer Engineer

Universidad Nacional del Sur · 2021
